Help

**Welcome**

You are currently not logged in.

You can access the choices currently listed on the left without logging in.

To access your secure information i.e., Roster, Advisor Lists, etc. You must log in first.

**Important message from the Registrar:**

Final Exams for Fall are Dec. 9 - 12. All Fall '08 grades are Due no later than Dec. 16.

1. The whole page should be face-lifted in ColdFusion or re-written in ASP.NET
2. The login section is currently pulling of pre-made fields. I would like to use LDAP to authenticate them using the same username/password they use to get into our enterprise system.
3. This page may not need to exist at all. I would like to make the choices/pages available once they log in, to available from our student portal.
4. The GPA Calculation, Room Search, and Search for Classes are not secure pages, so no authentication is needed. I'll explain those changes and go back to the secure pages later.

1. This is a page that allows people to search for room availability on campus.
2. The top section allows you to search for all rooms that are available based on certain criteria.
3. The bottom section allows you to see what is going on in a specific building or room based on certain criteria.
4. CHANGE: We store room and building attributes, i.e., whether it is a smart room, media equipment, handicap accessible, etc. I would like to add the ability to search on these attributes.

1. This is the Schedule of Classes Search screen. We have an undergraduate campus, and Law School campus. This page was specifically designed for the undergraduate campus.
2. CHANGE: How the term drop down screen displays term codes to choose from.
3. CHANGE: Get rid of the "campus" selection.
4. CHANGE: Based on the term chosen, filter in the full instructor name in the "Instructor last Name" field. So that students can search on a specific instructor, or multiple instructors.
5. No other changes to be made to the output pages for the undergraduate campus.
6. CHANGE: Although both campuses use the same database for courses, the way they search for courses and they way I want courses to display are drastically different. The next page is the proposed way the search screen can accommodate both colleges. If you think two different search screens would be better, that is fine. Or if you have a totally different idea, let me know...

#### Campus Specific filters and print options:

##### WHITTIER COLLEGE:

---

##### WHITTIER LAW SCHOOL:

7. CHANGE: campus specific filters and options are the main additions, the College just wants a printout, but the law school wants totally different output. It would be nice if this section would not show at all, until you choose a term, if you choose a COLLEGE term, you see the search and filters for the college. If you choose a LAW SCHOOL term, you will see the search and filters for that law school.
8. CHANGE: UNDER LAW SCHOOL, When you choose  button, you will get a screen similar to the main campus search with the addition of:
  - a. Final exam times.
  - b. Attributes
  - c. Specific section comments
  - d. Each section has its own line of data, not grouped on title like the COLLEGE output page
  - e. Take out "Lib ED", "Session", "Fee", "XL-Max" and "XL-Enr"
  - f. Add a "AVL" field that will show the seats available, (Enr – Max = "AVL")

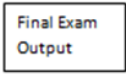

9. CHANGE: When you click the  button, you should get the following output:

**Spring 2009 - Law School**

## CHANGES TO SECURE PAGES

Once an instructor/Advisor logs in, they can only see two choices, “Class Roster” and “Advisor list”. This information is specific to the instructor, so it needs to be secure. I would still like for it to authenticate the user through LDAP, so the user does not have to enter a different username and password.

When you look at all advisors, the “holds” link, actually queries to see if a student has a hold. I want the page to be changes to show the word “Holds” ONLY if a hold exists. If no hold exists, nothing will show in the column.

## 2. CHANGE: We store the “Reg Appointment” time in a different table now (SFRBGRP). It should read from that table.

3. CHANGE: Put the address information on a different line with a separator so the user can see all the information in one screen without scrolling sideways across the screen. Below is a sample of what the output screen should look like:

ID	Name	Holds	Class	Deg	Major1	Major2	Minor1	Minor2	REG	CUM	Reg Apt Time	ADVR	ADD	Remove	Process

4. CHANGE: Based on the sample above in #3, add functionality where an advisor can populate the advisor table to be able to add and remove "ADVISOR" holds ONLY. This is the same table the "Holds" column runs from, however, the "holds" column should not show "ADVISOR" holds. The "ADVISOR" holds will show as "yes" or "no".
